Why you need Agilent certified reference materials and solutions

Agilent is a global leader in chromatography and spectroscopy, as well as an expert in chemical standards manufacturing. All Agilent chemical standards in this catalog are certified reference materials (CRM), standards, and solutions that are manufactured in an accredited ISO 17025 and ISO 17034 facility.

ISO 17025 is the global quality standard for the management and technical requirements of testing laboratories. Establishing and maintaining this quality system can be time-consuming.

Being ISO 17034 accredited, our manufacturing facility must demonstrate that they are technically competent, use documented and validated methods, and are able to produce precise and accurate test and calibration data with known uncertainties.

With both accreditations, Agilent offers a comprehensive portfolio of certified reference materials that have been expertly designed and formulated to exacting specifications. From instrument-focused standards to application standards, our portfolio gives laboratories full workflow solutions for efficient, accurate results.

With over 50 years of technical expertise in measurement science, we provide quality products to address the entire analytical chemistry workflow for laboratories around the world. Our products are available through our global distribution channels, and with our logistic capabilities we offer rapid turnaround times on all orders. With Agilent standards, your laboratory is assured of quality, purity, and consistency.

Products

- Certified reference materials (CRM)
- Reference materials (RM)
- Calibration standards
- IQ/OQ/PQ standards
- Qualification standards
- Quality check samples and kits
- Buffers and reagents
- Tuning solutions
- Checkout standards

Markets

Environmental

- Petrochemicals
- PCB/PBB
- Halocarbons
- VOC/semi-VOC

Custom products

Do you need a custom reference material or other chemical solution unique to your laboratory or testing procedure?

If the product you require is not available in an Agilent catalog, we can prepare it for you on a custom basis. Custom reference materials are a fast way to meet your specific laboratory needs.

Agilent maintains an expansive compatibility database, integrating 50 years of manufacturing and quality control data to create stable and reliable custom product formulations. Choose from any of our three quality control validation levels (see **Page 4**).

Visit www.agilent.com/chem/standards to request a custom quote.

Quality control laboratory

Agilent operates an ISO 17025 accredited quality control laboratory and is accredited to ISO 17034 as a reference material producer for the manufacture of certified reference materials (CRM).

Rely on the expertise of our applications development group for:

- Method development
- Pre- and postfill analysis
- Stability testing and protocols
- Homogeneity testing

Quality control validation levels

Chemical standards manufactured by Agilent are supplied with a lot-specific certificate of analysis (C of A) that reflects the associated quality control validation level. Certificates of analysis can ship with the product and are available online. All Agilent products, unless otherwise stated, are Level II - ISO 17034 reference materials.

		Reported Value	Reported Uncertainty	Former Name	Solutions	Lead Time (Customs)
Level I	ISO 17034 RM	True (calculated)	U_{char}	Gravimetric	Y	5 business days
Level II	ISO 17034 RM	True (analytical)	U_{char}	Full validation	Y	7 to 10 business days
Level III	ISO 17034 CRM	Certified	U_{exp}	ISO 17034	Y	15 to 20 business days

Level I solution: A reference material (RM) prepared gravimetrically in accordance with ISO 17034 and under the Agilent ISO 9001 registered quality system. The neat materials used for the product are verified by an Agilent ISO 17025 laboratory and under the Agilent ISO 17034 accreditation. For each analyte, the true value, with its uncertainty value calculated at 95% confidence level, is reported.

Level II solution: RM prepared gravimetrically in accordance with ISO 17034 and under the Agilent ISO 9001 registered quality system. The neat materials used for the product are verified by an Agilent ISO 17025 laboratory and under the Agilent ISO 17034 accreditation. The analyte concentrations are verified by an Agilent ISO 17025 accredited laboratory. For each analyte, the true value, with its uncertainty value calculated at 95% confidence level, is reported.

Level III solution: RM prepared gravimetrically in accordance with ISO 17034 and under the Agilent ISO 9001 registered quality system. The neat materials used for this product are verified by an Agilent ISO 17025 laboratory and under the Agilent ISO 17034 accreditation. The analyte concentrations are verified by an Agilent ISO 17025 accredited laboratory. For each analyte, the certified value is reported with its uncertainty value calculated as the expanded uncertainty, in accordance with ISO Guide 35.

Triple certification

Agilent is committed to product integrity by offering customers the assurance of triple certification to ISO standards.

Agilent operates under an ISO 9001 registered quality management system, where an accrediting body Technischer Überwachungsverein (TÜV) attests to the quality of our methods, procedures, testing, production, and record keeping.

Our quality control laboratory is accredited to ISO 17025 ANSI National Accreditation Board (ANAB) for technical competence to perform testing of organic and inorganic materials and certified reference materials, as defined in our scope, accessible online at www.agilent.com/chem/17025.

Agilent is further accredited to ISO 17034 (ANAB) for technical competence as a reference material producer of certified reference materials. This requires Agilent to identify and document the major components of uncertainty, including homogeneity, short- and long-term stability, and uncertainty due to analytical characterization and manufacturing.

The most up-to-date Agilent certifications are accessible at www.agilent.com/quality.

Tips and tools

Need to know more about the Agilent ISO 17025 and 17034 accreditation? Go to our Agilent quality website where you can view our certifications and ask questions. www.agilent.com/quality/index.html

GHS compliance

Agilent is a certified Globally Harmonized System of Classification and Labeling of Chemicals (GHS) author for Safety Data Sheets (SDS) and GHS-compliant labeling. Chemical products manufactured and distributed by Agilent are compliant with the GHS. SDS and labels are prepared in accordance with regulations and in the following languages:

European CLP regulation

Regulation 1272/2008

- Chinese (standard Mandarin)
- Czech
- Danish
- Dutch
- English
- Estonian
- Finnish
- French
- German
- Italian
- Japanese
- Korean
- Polish
- Portuguese
- Romanian
- Russian
- Spanish
- Swedish

USA GHS-OSHA regulation

Hazcom 2012

- English
- Spanish
- French

Chinese GHS regulation

GB/T 17519-2013 and GB/T 16483-2008

- Chinese (standard Mandarin)
- English

More languages are available on request.

As regulations are updated and expanded, Agilent will maintain up-to-date records online at www.agilent.com.

Tips and tools

To view our entire portfolio of over 4,000 standards, all manufactured under ISO 17025 and in an ISO 17034 accredited facility, please visit www.agilent.com/chem/standards.

NIST methods for accuracy and traceability

All Agilent spectroscopy CRMs are certified using the high-performance spectroscopy protocol¹ developed by the National Institute of Standards and Technology (NIST). Both the certified concentration and uncertainty values are traceable to NIST Standard Reference Materials (SRM) to ensure the highest accuracy and complete traceability. NIST uses high-performance ICP-OES to certify its SRM 3100 series of spectrometric single element solution standards. NIST recommends that all manufacturers of standards use this technique to certify single element standards with high accuracy, low uncertainty, and direct traceability to the NIST SRM 3100 series.

Figure 1 shows a typical C of A for an Agilent spectroscopy CRM. This C of A highlights some of the features of our CRMs that improve quality and productivity. Agilent CRMs are manufactured in an ISO 9001, ISO 17034 facility and certified in an ISO/IEC 17025 testing laboratory. The certified concentrations are reported as both weight/volume ($\mu\text{g/mL}$) or weight/weight ($\mu\text{g/g}$) on the C of A.

The standards have a long shelf life of up 48 months, supported by long-term stability studies performed as part of the requirements for ISO 17034 accreditation.

All Agilent inorganic standards are made from high-purity raw materials, high-purity acids, and 18 M Ω deionized water. They are packed in precleaned, high-purity high-density polyethylene (HDPE) bottles before being shipped in poly-sealed bags with tamper-evident seals.

¹Salit, M. et al. Anal. Chem. 2001, 73, 4821-4829.

Tips and tools

In a matrix, trace HF refers to a small amount of hydrofluoric acid (HF) added to stabilize some elements that require it. Concentrations are usually below 0.5%. F- refers to fluoride as part of a raw material compound. These have F- at similarly low, dilute levels with no additional fluoride added.

methyl-3,5-dichlorobenzoate	100.1 ±	0.5 µg/mL	002905-67-1	RM03048
dichlorprop methyl ester	100.2 ±	0.5 µg/mL	057153-17-0	RM00002
dinoseb methyl ether	100.3 ±	0.5 µg/mL	006099-79-2	RM03051
MCPA methyl ester	10025 ±	50 µg/mL	002436-73-9	RM15493
MCPP methyl ester	10030 ±	50 µg/mL	023844-56-6	RM03034
4-nitroanisole	100.3 ±	0.5 µg/mL	000100-17-4	RM02398
pentachloroanisole	100.3 ±	0.5 µg/mL	001825-21-4	RM02457
picloram methyl ester	100.1 ±	0.5 µg/mL	014143-55-6	RM03044
silvex methyl ester	100.4 ±	0.5 µg/mL	004841-20-7	RM03035
2,4,5-T methyl ester	100.5 ±	0.5 µg/mL	001928-37-6	RM03033

Matrix: methanol (methyl alcohol)

Description

This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above.

Traceability

The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Single Element Standards

Certified reference materials (CRM)

As technology improves and regulatory bodies keep pace with the identification of new analytes and detection limits, certified reference material producers must stay ahead of the curve with better-defined standards and calibrators. In the absence of ISO 17034 CRM, laboratory technicians often undertake the time-consuming task of assessing and documenting the uncertainties of calibration standards in use.

ISO 17034 accreditation requires the CRM manufacturer to identify the major uncertainties, including homogeneity, short-term stability, long-term stability, and analytical characterization. Agilent fulfills international requirements with ISO 17034 CRMs at ideal concentrations of 10 and 1,000 ppm for a complete line of inorganic standards.

All products are provided with an ISO 17034 Certificate of Analysis, prepared according to ISO Guide 35.

Ytterbium	5% HNO ₃	5190-8553	
Yttrium	5% HNO ₃	5190-8555	5190-8556
Zinc	5% HNO ₃	5190-8557	5190-8558
Zirconium	5% HCl	5190-8559	5190-8560

Tips and tools

When working with osmium, only mix the standard with water and HCl. Do not use nitric acid. Nitric acid will slowly oxidize the Os to OsO₄, which is volatile and very toxic.

ISO 17034 Reference Materials

Agilent quality

- Manufactured in accordance with ISO Guide 17034 and under our ISO 9001 registered quality system
- Analyte concentrations are verified by our ISO 17025 accredited laboratory
- Starting materials have a purity of 99.999% (ICP), wherever possible
- High-purity acids and ASTM Type I water (> 18 MΩ)
- Traceable to NIST SRM, wherever possible
- Analyzed for trace metal impurities
- Confirmed against an independent second-source standard
- Packaged in an ISO Class 7 clean room
- Assayed by NIST HP-ICP-OES method and purity confirmed by ICP-MS

Tips and tools

If you need to prepare your standards in an HCl matrix, remember that silver is stable in HCl up to 100 mg/L. To prepare solutions in HCl, add Ag concentrate to concentrated HCl to effect complexation, then bring to volume with dilute HCl.

AA buffers and ionization suppressants

AA buffers and ionization suppressants

Buffers	Concentration	Matrix	Part No. 500 mL
Cesium nitrate ionization buffer solution	10,000 µg/mL	5% HNO ₃	5190-8343
Lanthanum (La) buffer	100,000 µg/mL	10% HNO ₃	5190-8801
Strontium buffer (Sr)	100,000 µg/mL	5% HNO ₃	5190-9419
Potassium (K) buffer	100,000 µg/mL	H ₂ O	5190-9420
Cesium buffer solution, 10 pct in 500 mL	100,000 µg/mL	5% HNO ₃	5190-9421

Tips and tools

To determine the mass of matrix modifier added to the furnace, multiply the concentration of the modifier by 0.005 for 5 µL aliquots or 0.02 for 20 µL aliquots.

Multi-Element Spectroscopy Instrumentation Standards

Agilent prepares various high-quality inorganic standards and solutions used to calibrate and verify that your spectroscopy instrument is performing at the highest levels. Our catalog of unique tuning solutions were developed to work with each type of spectroscopy instrument associated with their tune mix. Application-based calibration standards and internal mixes are also included in this section to help with any method development or quality control issues.

Agilent quality

- Manufactured in accordance with ISO Guide 17034 and under our ISO 9001 registered quality system
- Analyte concentrations are verified by our ISO 17034 accredited laboratory
- Starting materials have a purity of 99.999% (ICP) and 99.99% (AA), wherever possible
- High-purity acids and ASTM Type I water (> 18 MΩ)
- Traceable to NIST SRM, wherever possible
- Analyzed for trace metal impurities
- Confirmed against an independent second-source standard

Calibration blank solution (suitable for use as a calibration blank or for dilution of the wavelength calibration concentrate; ready to use)	0	5% HNO ₃		0 µg/mL			5190-7001

Tips and tools

The shelf life defines the time that the standard can be stored without undergoing physical or chemical changes. The chemical stability and transpiration losses (water loss) determine shelf life. Replace standards well before the expiry date to ensure accuracy and minimize contamination risks.

Multi-Element Spectroscopy Instrumentation Standards

MP-AES and ICP-OES multi-element calibration standards

Description	Analyte	Matrix	Analytes and Concentration				Part No. 125 mL
Calibration mix 1 for AA and ICP-OES	4	2% HNO ₃ trace 0.5% HF	Antimony (Sb) Molybdenum (Mo)	100 µg/mL 100 µg/mL	Thallium (Tl) Tin (Sn)	100 µg/mL 100 µg/mL	6610030500
Calibration mix 2 for AA and ICP-OES	18	5% HNO ₃	Aluminum (Al) Arsenic (As) Barium (Ba) Beryllium (Be) Cadmium (Cd) Cobalt (Co) Chromium (Cr) Copper (Cu) Manganese (Mn)	100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	Nickel (Ni) Lead (Pb) Selenium (Se) Silver (Ag) Thallium (Tl) Thorium (Th) Uranium (U) Vanadium (V) Zinc (Zn)	100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	6610030600
Calibration mix majors for AA and ICP-OES	5	5% HNO ₃	Calcium (Ca) Iron (Fe) Magnesium (Mg)	500 µg/mL 500 µg/mL 500 µg/mL	Potassium (K) Sodium (Na)	500 µg/mL 500 µg/mL	6610030700
ICP-OES calibration standard (I)	19	5% HNO ₃	Aluminum (Al) Barium (Ba) Beryllium (Be) Bismuth (Bi) Boron (B) Barium (Ba) Chromium (Cr) Cobalt (Co) Copper (Cu) Gallium (Ga)	100 µg/mL 5 µg/mL 1 µg/mL 200 µg/mL 15 µg/mL 20 µg/mL 25 µg/mL 20 µg/mL 20 µg/mL 150 µg/mL	Indium (In) Iron (Fe) Lead (Pb) Manganese (Mn) Nickel (Ni) Silver (Ag) Strontium (Sr) Thallium (Tl) Zinc (Zn)	200 µg/mL 15 µg/mL 200 µg/mL 5 µg/mL 50 µg/mL 50 µg/mL 1 µg/mL 400 µg/mL 20 µg/mL	ICM-102
ICP-OES calibration standard (IV)	23	5% HNO ₃	Aluminum (Al) Barium (Ba) Bismuth (Bi) Boron (B) Cadmium (Cd) Calcium (Ca) Chromium (Cr) Cobalt (Co) Copper (Cu) Gallium (Ga) Indium (In) Iron (Fe)	1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL	Lead (Pb) Lithium (Li) Magnesium (Mg) Manganese (Mn) Nickel (Ni) Potassium (K) Silver (Ag) Sodium (Na) Strontium (Sr) Thallium (Tl) Zinc (Zn)	1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL 1,000 µg/mL	ICM-103
ICP-OES calibration standard (VIII)	24	5% HNO ₃ with trace HCl	Aluminum (Al) Barium (Ba) Beryllium (Be) Bismuth (Bi) Boron (B) Cadmium (Cd) Calcium (Ca) Chromium (Cr) Cobalt (Co) Copper (Cu) Gallium (Ga) Iron (Fe)	100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	Lead (Pb) Lithium (Li) Magnesium (Mg) Manganese (Mn) Nickel (Ni) Potassium (K) Selenium (Se) Sodium (Na) Strontium (Sr) Tellurium (Te) Thallium (Tl) Zinc (Zn)	100 µg/mL 100 µg/mL 1,000 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	ICM-101
ICP-OES calibration standard – toxic elements (IX)	9	5% HNO ₃	Arsenic (As) Beryllium (Be) Cadmium (Cd) Chromium (VI) (Cr ⁶⁺) Lead (Pb)	100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	Mercury (Hg) Nickel (Ni) Selenium (Se) Thallium (Tl)	100 µg/mL 100 µg/mL 100 µg/mL 100 µg/mL	ICM-105

MP-AES and ICP-OES multi-element calibration standards

Description	Analyte	Matrix	Analytes and Concentration				Part No. 125 mL				
ICP-OES calibration standard – surface water (X)	23	5% HNO ₃ trace HF	Arsenic (As)	50 µg/mL	Magnesium (Mg)	15,000 µg/mL	ICM-106				
			Barium (Ba)	50 µg/mL	Manganese (Mn)	30 µg/mL					
			Beryllium (Be)	20 µg/mL	Molybdenum (Mo)	100 µg/mL					
			Bismuth (Bi)	10 µg/mL	Nickel (Ni)	50 µg/mL					
			Boron (B)	100 µg/mL	Potassium (K)	3,000 µg/mL					
			Cadmium (Cd)	20 µg/mL	Selenium (Se)	10 µg/mL					
			Calcium (Ca)	35,000 µg/mL	Sodium (Na)	8,000 µg/mL					
			Chromium (Cr)	20 µg/mL	Strontium (Sr)	100 µg/mL					
			Cobalt (Co)	25 µg/mL	Thallium (Tl)	10 µg/mL					
			Copper (Cu)	20 µg/mL	Vanadium (V)	50 µg/mL					
			Iron (Fe)	100 µg/mL	Zinc (Zn)	50 µg/mL					
			Lead (Pb)	25 µg/mL							
			ICP-OES calibration standard – sewage sludge (XI)	7	5% HNO ₃	Cadmium (Cd)		10 µg/mL	Mercury (Hg)	8 µg/mL	ICM-109
						Chromium (Cr)		900 µg/mL	Nickel (Ni)	200 µg/mL	
Copper (Cu)	800 µg/mL	Zinc (Zn)				2,500 µg/mL					
Lead (Pb)	900 µg/mL										
ICP-OES calibration standard – trace metals (XIII)	15	5% HNO ₃ trace HF	Aluminum (Al)	500 µg/mL	Lead (Pb)	100 µg/mL	ICM-104				
			Arsenic (As)	100 µg/mL	Manganese (Mn)	100 µg/mL					
			Beryllium (Be)	100 µg/mL	Mercury (Hg)	5 µg/mL					
			Cadmium (Cd)	25 µg/mL	Nickel (Ni)	100 µg/mL					
			Chromium (Cr)	100 µg/mL	Selenium (Se)	25 µg/mL					
			Cobalt (Co)	100 µg/mL	Vanadium (V)	250 µg/mL					
			Copper (Cu)	100 µg/mL	Zinc (Zn)	100 µg/mL					
			Iron (Fe)	100 µg/mL							
ICP-OES calibration standard – quality control (XVI)	21	5% HNO ₃ trace HF, tartaric acid	Antimony (Sb)	100 µg/mL	Magnesium (Mg)	100 µg/mL	ICM-108				
			Arsenic (As)	100 µg/mL	Manganese (Mn)	100 µg/mL					
			Beryllium (Be)	100 µg/mL	Molybdenum (Mo)	100 µg/mL					
			Cadmium (Cd)	100 µg/mL	Nickel (Ni)	100 µg/mL					
			Calcium (Ca)	100 µg/mL	Selenium (Se)	100 µg/mL					
			Chromium (Cr)	100 µg/mL	Strontium (Sr)	100 µg/mL					
			Cobalt (Co)	100 µg/mL	Thallium (Tl)	100 µg/mL					
			Copper (Cu)	100 µg/mL	Titanium (Ti)	100 µg/mL					
			Iron (Fe)	100 µg/mL	Vanadium (V)	100 µg/mL					
			Lead (Pb)	100 µg/mL	Zinc (Zn)	100 µg/mL					
			Lithium (Li)	100 µg/mL							
			ICP-OES calibration standard – earth alkali elements (III)	4	5% HNO ₃	Barium (Ba)		1,000 µg/mL	Magnesium (Mg)	1,000 µg/mL	ICM-100
						Calcium (Ca)		1,000 µg/mL	Strontium (Sr)	1,000 µg/mL	
ICP-OES calibration standard – HCl soluble elements (XVII)	7	15% HCl trace HNO ₃ , HF, tartaric acid	Antimony (Sb)	100 µg/mL	Tin (Sn)	100 µg/mL	ICM-107				
			Hafnium (Hf)	100 µg/mL	Titanium (Ti)	100 µg/mL					
			Iridium (Ir)	100 µg/mL	Zirconium (Zr)	100 µg/mL					
			Tantalum (Ta)	100 µg/mL							

Tips and tools

Stay up to date with the best ICP-OES practices for instrument maintenance and operation.

Multi-Element Spectroscopy Instrumentation Standards

ICP-OES tuning solution

Description	Analyte	Matrix	Analytes and Concentration				Volume	Part No.
ICP-OES tuning standard (XXIV)	15	1% HNO ₃	Aluminum (Al)	50 µg/mL	Manganese (Mn)	50 µg/mL	500 mL	ICM-120
			Arsenic (As)	50 µg/mL	Molybdenum (Mo)	50 µg/mL		
			Barium (Ba)	50 µg/mL	Nickel (Ni)	50 µg/mL		
			Cadmium (Cd)	50 µg/mL	Potassium (K)	500 µg/mL		
			Chromium (Cr)	50 µg/mL	Selenium (Se)	50 µg/mL		
			Cobalt (Co)	50 µg/mL	Strontium (Sr)	50 µg/mL		
			Copper (Cu)	50 µg/mL	Zinc (Zn)	50 µg/mL		
			Lead (Pb)	50 µg/mL				

ICP-OES internal standard

Description	Analyte	Matrix	Analytes and Concentration				Volume	Part No.
ICP internal standard mix	6	5% HNO ₃	Bismuth (Bi)	100 µg/mL	Scandium (Sc)	100 µg/mL	125 mL	6610030400
			Indium (In)	100 µg/mL	Terbium (Tb)	100 µg/mL		
			Lithium (Li ⁶⁺)	100 µg/mL	Yttrium (Y)	100 µg/mL		

ICP-OES, GFAA, and ion chromatography standards

Description	Analyte	Matrix	Analytes and Concentration				Volume	Part No.
IC cations mixture (VII)	9	0.2% HNO ₃	Ammonium (NH ₄ ⁺)	100 µg/mL	Manganese (Mn)	100 µg/mL	125 mL	ICC-330
			Barium (Ba ²⁺)	100 µg/mL	Potassium (K ⁺)	100 µg/mL		
			Calcium (Ca ²⁺)	100 µg/mL	Sodium (Na ⁺)	100 µg/mL		
			Lithium (Li ⁺)	100 µg/mL	Strontium (Sr ²⁺)	100 µg/mL		
			Magnesium (Mg ²⁺)	100 µg/mL				

Tips and tools

As a rule, the total concentration of all elements (metals) in a multi-element mixture should be kept below 20,000 µg/mL (2%).

Agilent IntelliQuant ICP-OES calibration standards

While quantitative elemental analysis remains the main use of ICP-OES instrumentation, semiquantitative analysis provides extra information, allowing the analyst to learn more about their samples. However, collecting and interpreting semiquantitative data on many ICP-OES instruments can be as time-consuming as collecting fully quantitative data. Users of these types of ICP-OES instruments may not realize the full potential of semiquantitative data acquisition. The Agilent 5800 and 5900 ICP-OES instruments include IntelliQuant—a powerful, dedicated semiquantitative analysis tool that allows you to understand the elemental content of your sample better. IntelliQuant can be used to improve traditional quantitative methods or to provide standalone semiquantitative results quickly and with minimal setup.

Description	Analyte	Matrix	Analytes and Concentration				Volume	Part No.
Individual standards								
IntelliQuant standard 1	13	5% HNO ₃	Arsenic (As)	100 µg/mL	Rubidium (Rb)	100 µg/mL	100 mL	5191-3933
			Chromium (Cr)	100 µg/mL	Scandium (Sc)	100 µg/mL		
			Erbium (Er)	100 µg/mL	Silver (Ag)	100 µg/mL		
			Lead (Pb)	100 µg/mL	Thulium (Tm)	100 µg/mL		
			Lutetium (Lu)	100 µg/mL	Yttrium (Y)	100 µg/mL		
			Manganese (Mn)	100 µg/mL	Ytterbium (Yb)	100 µg/mL		
			Phosphorus (P)	100 µg/mL				
IntelliQuant standard 2	8	5% HNO ₃	Cerium (Ce)	100 µg/mL	Lanthanum (La)	100 µg/mL	100 mL	5191-3934
			Europium (Eu)	100 µg/mL	Nickel (Ni)	100 µg/mL		
			Gadolinium (Gd)	100 µg/mL	Sulfur (S)	100 µg/mL		
			Holmium (Ho)	100 µg/mL	Tellurium (Te)	100 µg/mL		
IntelliQuant standard 3	6	5% HNO ₃	Cobalt (Co)	100 µg/mL	Samarium (Sm)	100 µg/mL	100 mL	5191-3935
			Dysprosium (Dy)	100 µg/mL	Thorium (Th)	100 µg/mL		
			Rhenium (Re)	100 µg/mL	Vanadium (V)	100 µg/mL		
IntelliQuant standard 4	19	5% HNO ₃	Boron (B)	100 µg/mL	Indium (In)	100 µg/mL	100 mL	5191-3936
			Barium (Ba)	100 µg/mL	Potassium (K)	100 µg/mL		
			Beryllium (Be)	100 µg/mL	Lithium (Li)	100 µg/mL		
			Bismuth (Bi)	100 µg/mL	Magnesium (Mg)	100 µg/mL		
			Calcium (Ca)	100 µg/mL	Sodium (Na)	100 µg/mL		
			Cadmium (Cd)	100 µg/mL	Selenium (Se)	100 µg/mL		
			Caesium (Cs)	100 µg/mL	Strontium (Sr)	100 µg/mL		
			Copper (Cu)	100 µg/mL	Thallium (Tl)	100 µg/mL		
			Gallium (Ga)	100 µg/mL	Zinc (Zn)	100 µg/mL		
			Mercury (Hg)	100 µg/mL				
IntelliQuant standard 5	7	5% HNO ₃	Aluminium (Al)	100 µg/mL	Praseodymium (Pr)	100 µg/mL	100 mL	5191-3937
			Iron (Fe)	100 µg/mL	Terbium (Tb)	100 µg/mL		
			Molybdenum (Mo)	100 µg/mL	Uranium (U)	100 µg/mL		
			Neodymium (Nd)	100 µg/mL				
IntelliQuant standard 6	10	5% HNO ₃ trace HF	Antimony (Sb)	100 µg/mL	Tin (Sn)	100 µg/mL	100 mL	5191-3938

Order from Agilent

Visit us online at www.agilent.com/chem/standards at any time and search for the products you need. If we don't have an item listed, you can request a custom quote online.

Alternatively, call our experienced customer service representatives for the information you need about Agilent products and your order. Visit www.agilent.com/chem/contactus to find out how.

Multi-Element Agency Method Standards

The Agilent portfolio also includes hundreds of ISO 17034 accredited reference materials that are application-based. We have mixes and kits that are formulated for various agency methods from the EPA, the Contract Laboratory Program (CLP), and United States Pharmacopeia (USP). Use these standards and mixes as part of your complete Agilent workflow solution. For more information, please see the Agilent consumable workflow solutions section of this catalog.

Agilent quality

- Manufactured in accordance with ISO 17034 and under our ISO 9001 registered quality system
- Analyte concentrations are verified by our ISO 17034 accredited laboratory
- Starting materials have a purity of 99.999% (ICP) and 99.99% (AA), wherever possible
- High-purity acids and ASTM Type I water (> 18 MΩ)
- Traceable to NIST SRM, wherever possible
- Analyzed for trace metal impurities
- Confirmed against an independent second-source standard

EPA Method 200.7 standards

Determination of metals and trace elements in water and wastes by ICP-OES and MP-AES

This guideline sets the method detection limit (MDL) for 31 different elements, along with preferred wavelengths and calibration, and quality control standards.

EPA 200.7 calibration standards – Revisions 4.4 and 3.3

Description	Analyte	Matrix	Analytes and Concentration				Volume	Part No.
Mixed calibration standard (CAL I)	10	2% HNO ₃	Antimony (Sb)	5 µg/mL	Calcium (Ca)	10 µg/mL	125 mL	ICM-231
			Arsenic (As)	10 µg/mL	Copper (Cu)	2 µg/mL		
			Barium (Ba)	1 µg/mL	Manganese (Mn)	2 µg/mL		
			Boron (B)	1 µg/mL	Selenium (Se)	5 µg/mL		
			Cadmium (Cd)	2 µg/mL	Silver (Ag)	0.5 µg/mL		
Mixed calibration standard (CAL II)	5	2% HNO ₃	Lithium (Li)	50 µg/mL	Sodium (Na)	100 µg/mL	125 mL	ICM-232
			Molybdenum (Mo)	100 µg/mL	Strontium (Sr)	10 µg/mL		
			Potassium (K)	200 µg/mL				
Mixed calibration standard (CAL III)	3	2% HNO ₃	Cobalt (Co)	20 µg/mL	Vanadium (V)	20 µg/mL	125 mL	ICM-233
			Phosphorus (P)	100 µg/mL				
Mixed calibration standard (CAL IV)	5	2% HNO ₃	Aluminum (Al)	100 µg/mL	Tin (Sn)	40 µg/mL	125 mL	ICM-234
			Chromium (Cr)	50 µg/mL	Zinc (Zn)	50 µg/mL		
			Silicon (Si)	100 µg/mL				
Mercury standard (CAL IVa)	1	2% HNO ₃	Mercury (Hg)	20 µg/mL			125 mL	ICM-235
Mixed calibration standard (CAL V)	6	2% HNO ₃	Beryllium (Be)	10 µg/mL	Magnesium (Mg)	100 µg/mL	125 mL	ICM-642
			Iron (Fe)	100 µg/mL	Nickel (Ni)	20 µg/mL		
			Lead (Pb)	100 µg/mL	Thallium (Tl)	50 µg/mL		

EPA 200.7 calibration standards kit – Revisions 4.4 and 3.3

Description	Standards and Volume				Part No.
Kit, 6 bottles	ICM-231	125 mL	ICM-234	125 mL	ICK-230A
	ICM-232	125 mL	ICM-235	125 mL	
	ICM-233	125 mL	ICM-642	125 mL	

EPA 200.7 additional calibration standards

Description	Analyte	Matrix	Analytes and Concentration			Volume	Part No.	
EPA 200.7 calibration standard 1	5	5% HNO ₃	Arsenic (As)	1,000 µg/mL	Selenium (Se)	500 µg/mL	125 mL	ICM-202
			Cadmium (Cd)	500 µg/mL	Thallium (Tl)	1,000 µg/mL		
			Lead (Pb)	1,000 µg/mL				
EPA 200.7 calibration standard 2	7	2% HNO ₃	Barium (Ba)	100 µg/mL	Iron (Fe)	1,000 µg/mL	125 mL	ICM-203

EPA Method 6010 and 6020 standards

EPA 6010 and 6020 are widely used performance-based guidelines for the analysis of 31 trace elements in ground water, soil, sediment, and solid waste. Waste and soil are often highly contaminated with multiple pollutants and significant spectral overlaps can occur when using ICP-OES for element analysis.

Contract laboratory program (CLP) standards

The primary service of the Contract Laboratory Program (CLP) is the provision of analytical data of known and documented quality to CLP customers. The CLP provides data through its chemical analytical service, and has implemented supporting services. Because of its supportive infrastructure, the CLP is able to provide all services in a cost-effective and efficient manner.

All analytical services are performed by EPA-approved contract laboratories who meet stringent requirements and standards to be part of the CLP. Each sample processed by the CLP is properly documented to ensure timely and accurate analysis for all requested parameters. This process creates sample data that can be used in potential enforcement actions.

CLP data is used for various purposes, such as defining the nature and extent of contamination at Superfund sites, determining appropriate cleanup actions, determining emergency response and remedial actions, and enforcement or litigation activities. The data may also be used in all stages of hazardous waste site investigations, including site inspections, Hazardous Ranking System (HRS) scoring, remedial investigation/feasibility studies, and remedial design.

Agilent has assembled all the necessary elemental standards required for Contract Laboratory Program (CLP) work. Each element is Agilent quality and traceable to a NIST SRM.

CLP ICP calibration standards

Description	Analyte	Matrix	Analytes and Concentration			Volume	Part No.
CLP ICP calibration verification standard 3	1	1% HNO ₃ trace tartaric acid	Antimony (Sb)	1,000 µg/mL		100 mL	5190-8244

Agilent 280Z-AA instrument

Cannabis

Countries and U.S. states that have permitted the use of medicinal and recreational marijuana have set guidelines on the amount of contaminants allowed during cultivation. Contamination with heavy metals like arsenic, lead, cadmium, and mercury poses a danger to health, so thorough testing of heavy metals is essential.

The analysis of minerals and additional trace elements provides labeling information that is required when these products are used as nutritional supplements. Since contamination can occur during the manufacturing process, analysis is necessary at all stages of production.

You can maximize confidence in your heavy metal testing with single and multi-element certified reference materials (CRMs) from Agilent. They are rigorously tested and manufactured using ISO 17025 and 17034 accreditations, and enable you to calibrate and quantify with confidence using Agilent verified methods and workflows.

Single element cannabis heavy metals

Element	Matrix	Concentration	Part No. 100 mL	Part No. 500 mL
Antimony (Sb)	1% HNO ₃	10 µg/mL	5190-8562	
	1% HNO ₃ tr tartaric acid	1,000 µg/mL	5190-8244	5190-8245

USP | ICH 232 standards

The Agilent ICH Q3D and USP 232 orals and parenteral kits consists of five CRMs that sort elements by ICH/USP class, chemical compatibility, and the relative mandated concentrations. This eliminates the need for analysts to prepare their own calibration standards from single element standards, reducing preparation time and minimizing errors. These kits include:

- A balanced range of elemental impurity CRMs to meet the method's oral or parenteral permitted daily exposure (PDE) levels
- An internal standard solution, which is optimized for best ICP-MS/ICP-OES results with common pharmaceutical sample types
- Manufactured in an ISO 17034 accredited facility and certified in an ISO/IEC 17025 testing laboratory
- A Certificate of Analysis confirming actual concentrations, measurement uncertainty, and NIST traceability

Proof of equivalency

We demonstrated equivalency between Agilent and PerkinElmer Wavecal Calibration Standards required to complete wavelength calibration on the PerkinElmer Optima Series ICP-OES. The analysis was performed on an Agilent 5100 ICP-OES in axial/radial view and aims to show equivalence in concentration (instrument response) and sample matrix (instrument signal). Figures 2 and 3 show that the signal for the selected element in the Agilent and PerkinElmer standards is almost identical and the baseline is free from unwanted components. This confirms that the Agilent standard is "clean" and equivalent to the PerkinElmer OEM Wavecal standard.

UV Wavecal calibration solution

Figure 2. Comparison of Agilent and PerkinElmer UV Wavecal calibration solution for arsenic at 1 mg/mL (396.847 nm) shows nearly identical traces (Agilent p/n: 5190-9410).

Vis Wavecal calibration solution

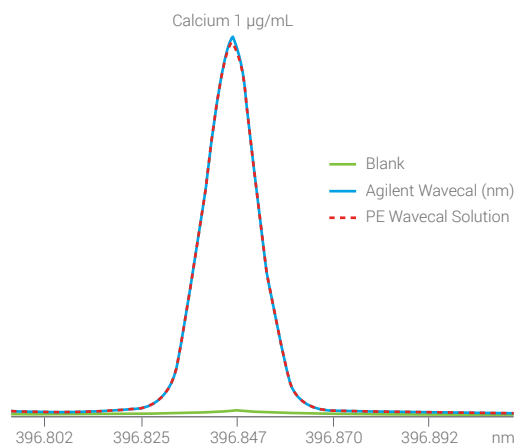

Figure 3. Comparison of Agilent and PerkinElmer Vis Wavecal calibration solution for calcium at 1 mg/mL (396.847 nm) shows nearly identical traces (Agilent p/n: 5190-9411).

Agilent UV-Vis calibration standards

Description	Analyte	Matrix	Analytes and Concentration	Volume	Part No.	
OQ/PV standards kit 1 for UV-Vis kit	6	0.01N H ₂ SO ₄	Potassium dichromate (K ₂ Cr ₂ O ₇)	600.6 mg/L	2 x 10 mL	5063-6503
		0.01N H ₂ SO ₄	Potassium dichromate (K ₂ Cr ₂ O ₇)	60.06 mg/L	2 x 10 mL

Cary 6000i UV-Vis instrument

Tips and tools

Don't underestimate the importance of good mixing when preparing standards. A simple swirl is not enough. Make a habit of inverting and shaking the container several times.

Metallo-Organic and Biodiesel Standards

- Highest quality metallo-organic mixes in the industry, manufactured in accordance with the requirements of ISO 17034 and ISO 17025
- Accuracy ensured by quality testing with NIST Standard Reference Materials
- Certificate of Analysis shows certified, not nominal, concentrations
- For use in blending and preparation of calibration standards for spectrometric analysis of metals in hydrocarbon/petrochemical samples

Wear metals

	Copper (Cu)	Potassium (K)	Zinc (Zn)			
		Lead (Pb)				

Tips and tools

Thorough mixing is especially important when using oil-based standards. Due to their viscosity, they are difficult to homogenize. For best results, always mix the standard by vigorously shaking the container for at least a few minutes. Alternatively, shake the container and sonicate the standard in an ultrasonic bath for several minutes.

Single element oil standards

- Highest quality metallo-organic mixes in the industry, manufactured in accordance with the requirements of ISO 17034 and ISO 17025
- Accuracy ensured by quality testing with NIST Standard Reference Materials
- Certificate of Analysis includes trace metal concentrations confirmed by ICP-OES

Tips and tools

Many of these compounds are sulfonate-based and therefore contain high levels of sulfur. If the absence of sulfur is important for your application, use sulfur-free standards.

Metallo-Organic and Biodiesel Standards

Single element standards in hydrocarbon oil

50 g			
Description	Matrix	Nominal Conc.	Part No.

Zirconium (Zr)	75 cSt hydrocarbon oil	1,000 µg/g	5190-8799
		5,000 µg/g	5190-8800

Tips and tools

Store metallo-organic standards in a cool, dry place away from moisture.

Base oil and solvents

- Highest quality metallo-organic mixes in the industry, manufactured in accordance with the requirements of ISO 17034 and ISO 17025
- Traceable to NIST SRM 1085b to ensure highest accuracy
- C of A includes trace metal concentrations confirmed by ICP-OES
- For use in blending and preparation of calibration standards for spectrometric analysis of metals in hydrocarbon/petrochemical samples

Base oil and solvents

Description	Matrix	Quantity	Part No.
Base mineral oil, <1 µg/g Used for blending and preparation of calibration standards for spectrometric analysis of metals in hydrocarbon/petrochemical samples	75 cSt mineral oil	500 mL	5190-8715
		1/2 gal	5190-8716
A-solv solvent Used for diluting metallo-organic standards, oils, and other organic solutions when preparing for spectrometric analysis of metals in hydrocarbon/petrochemical samples. Use as a matrix blank and as a diluent.	Proprietary solvent	1 gal	5190-8717
Biodiesel blank Excellent matrix match for almost all biodiesel fuels. Use as a calibration blank for analysis of metals or sulfur in biodiesel.	B100 biodiesel	100 mL	5190-8718
		500 mL	5190-8719

Internal standard for oil analysis

- Corrects for wide variations in sample viscosity or oil composition
- Easy to use when added to the diluent before sample preparation

Base oil and solvents

200 g				
Description	Matrix	Analytes and Concentration		Part No.
Cobalt internal standard	Hydrocarbon oil	Cobalt (Co)	5,000 µg/g	5190-8714

Proof of equivalency

We demonstrated the quality of Agilent standards by comparing them with industry-leading Conostan metallo-organic multi-element oil and biodiesel standards. Conostan standards are the benchmark for metallo-organic analysis, in particular for customers performing wear metal analysis in lubricating oils and biodiesel.

The analyses were performed on an Agilent 5100 ICP-OES in radial view. The signals in Figures 4, 5, and 6 reveal an excellent match between the wear metal standards from Agilent and Conostan. We analyzed phosphorus, sodium, and boron because the industry regards these elements as more difficult to measure. There were no differences in matrix background or response when comparing Agilent A21+K and Conostan S21+K wear metal standards. In addition, there was no significant change in the emission spectrum on either side of the analytical wavelength. The baseline indicates that the standard is free from unwanted components, which would increase the background. The traces in Figures 4, 5, and 6 confirm that the Agilent standard is “clean” and analytically equivalent to the Conostan standard.

Wear metal and metallo-organic standards

Figure 4. Comparison of Agilent and Conostan wear metal standards for 50 µg/g sodium in hydrocarbon oil at 588.995 nm. Na is an element prone to contamination. The traces are identical, demonstrating excellent agreement (Agilent p/n: 5190-8712).

Figure 5. Comparison of Agilent and Conostan wear metal standards for 50 µg/g phosphorus in hydrocarbon oil at 214.914 nm. The traces are virtually identical, demonstrating excellent agreement (Agilent p/n: 5190-8712).

Single element oil standards

Figure 6. Boron is reputedly difficult to quantify due to its instability in hydrocarbon matrices. A comparison of Agilent and Conostan single element 100 µg/g standards for boron at 249.679 nm shows nearly identical traces with no differences in matrix background. The measured signal intensity is also comparable, confirming again that the Agilent standard is “clean” and equivalent to the Conostan standard (Agilent p/n 5190-8740).

Biodiesel standards

Metals in biodiesel standards

- Formulated specifically for analysis of metals in biodiesel fuel to ASTM D6751 and EN14214
- Matrix is 100% biodiesel to eliminate matrix variations
- Made from soybean oil, which is an excellent matrix match for most biodiesels

Metals in biodiesel standards

Description	Contains	Matrix	Conc.	Part No.
Metal additives standard, MA5	Barium (Ba) Calcium (Ca) Magnesium (Mg) Phosphorus (P) Zinc (Zn)	75 cSt hydrocarbon oil	900 µg/g	5190-8720
Metals in biodiesel standard	Calcium (Ca) Potassium (K) Magnesium (Mg) Sodium (Na) Phosphorus (P)	B100 biodiesel	5 µg/g	5190-8717
			10 µg/g	5190-8722
			20 µg/g	5190-8723

Sulfur in biodiesel standards

- Formulated specifically for analysis of sulfur in biodiesel fuel to ASTM D2622, D4294, D5453, D6751 and others
- Matrix is 100% biodiesel to eliminate matrix variations
- Made from soybean oil, which is an excellent matrix match for most biodiesels

Sulfur in biodiesel standards

Supplied in 100 mL bottles				
Description	Contains	Matrix	Conc.	Part No.
Sulfur in biodiesel standard	Sulfur (S)	B100 biodiesel	10 µg/g	5190-8724
			15 µg/g	5190-8725
			20 µg/g	5190-8726
			25 µg/g	5190-8727
			50 µg/g	5190-8728
			100 µg/g	5190-8729
			500 µg/g	5190-8730

Proof of equivalency

We demonstrated the quality of Agilent biodiesel standards by comparing them with industry-leading Conostan biodiesel standards. The signals in Figures 7, 8, and 9 reveal an excellent match between the biodiesel standards from Agilent and Conostan. We analyzed phosphorus, sulfur, and potassium because the industry regards these elements as more difficult to measure in biodiesel. The signals for the Agilent and Conostan standards are virtually identical for the nominated elements. In addition, there is no significant change in the emission spectrum on either side of the analytical wavelength. This baseline indicates that the standard is free from unwanted components that would increase the background. The traces in Figures 7, 8, and 9 confirm that the Agilent standard is “clean” and equivalent to the Conostan standard.

Biodiesel standards

Figure 7. Comparison of Agilent and Conostan Biodiesel B100 standards for potassium at 2 µg/g (766.491 nm) shows nearly identical traces (Agilent p/n: 5190-8723).

Figure 8. Comparison of Agilent and Conostan Biodiesel B100 standards for phosphorus at 2 µg/g (213.618 nm) demonstrates excellent agreement (Agilent p/n: 5190-8723).

Sulfur in biodiesel standards

Figure 9. Comparison of Agilent and Conostan Biodiesel B100 standards for sulfur at 50 µg/g (182.562 nm) shows nearly identical traces (Agilent p/n: 5190-8730).

Ion Chromatography Standards

Anion standards for ion chromatography

Agilent offers various anion and cation single and multi-element standards for ion chromatography analysis. All reference materials are manufactured in an accredited ISO 17025 and 17034 facility with high-purity chemicals and water. Our comprehensive portfolio can be used for various routine anion and cation analyses.

Anion standards for ion chromatography

Ion	Volume	Part No. 1,000 µg/mL
Acetate	125 mL	ICC-014
Bromate	125 mL	ICC-010
Bromide	125 mL	ICC-001
Chlorate	125 mL	ICC-011
Chloride	125 mL	ICC-002
Chlorite	125 mL	ICC-012
Chromate	125 mL	ICC-016
Citrate	125 mL	ICC-017
Fluoride	125 mL	ICC-003
Formate	125 mL	ICC-018
Iodide	125 mL	ICC-020
Lactate	125 mL	ICC-021

(Continued)

Anion standards for ion chromatography

Ion	Volume	Part No. 1,000 µg/mL
Nitrate	125 mL	ICC-004
Nitrate (as N)	125 mL	ICC-004A
Nitrite	125 mL	ICC-007
Nitrite (as N)	125 mL	ICC-007A
Oxalate	125 mL	ICC-026
Perchlorate	125 mL	ICC-013
Phosphate	125 mL	ICC-005
Orthophosphate (as P)	125 mL	ICC-005A
Propionate	125 mL	ICC-028
Sulfate	125 mL	ICC-006
Thiosulfate	125 mL	ICC-032

Order from Agilent

Visit us online at www.agilent.com and search for the products you need. If we don't have an item listed, you can request a custom quote online.

Alternatively, call our experienced customer service representatives for the information you need about Agilent products and your order. Visit www.agilent.com/chem/contactus to find out how.

Anion mixtures for ion chromatography

IC anion mixtures

Description	Analyte	Matrix	Analytes and Concentration			Total Vol.	Part No.	
IC anions mixture 1	5	H ₂ O	Chloride (Cl ⁻)	30 µg/mL	Phosphate (PO ₄ ³⁻)	150 µg/mL	125 mL	ICC-200
			Fluoride (F ⁻)	20 µg/mL	Sulfate (SO ₄ ²⁻)	150 µg/mL		
			Nitrate (NO ₃ ⁻)	100 µg/mL				
IC anions mixture 2	6	H ₂ O	Bromide (Br ⁻)	400 µg/mL	Nitrate (NO ₃ ⁻)	400 µg/mL	125 mL	ICC-210
			Chloride (Cl ⁻)	200 µg/mL	Phosphate (PO ₄ ³⁻)	600 µg/mL		
			Fluoride (F ⁻)	100 µg/mL	Sulfate (SO ₄ ²⁻)	400 µg/mL		

Cation standards for chromatography and ion chromatography

Chromatography cation standards

Ion	Matrix	Volume	Part No. 1,000 µg/mL
Ammonium (NH ₄ ⁺)	H ₂ O	125 mL	ICC-101
Calcium (Ca ²⁺)	0.2% HNO ₃	125 mL	ICC-103
Lithium (Li ⁺)	0.2% HNO ₃	125 mL	ICC-104
Magnesium (Mg ²⁺)	0.2% HNO ₃	125 mL	ICC-105
Potassium (K ⁺)	0.2% HNO ₃	125 mL	ICC-106
Sodium (Na ⁺)	0.1% HNO ₃	125 mL	ICC-107
Strontium (Sr ²⁺)	0.2% HNO ₃	125 mL	ICC-108

Cation mixtures for ion chromatography

IC cations mixtures

Description	Analyte	Matrix	Analytes and Concentration			Total Vol.	Part No.	
IC cations mixture 1	6	0.2% HNO ₃	Ammonium (NH ₄ ⁺)	400 µg/mL	Magnesium (Mg ²⁺)	200 µg/mL	125 mL	ICC-300
			Calcium (Ca ²⁺)	1,000 µg/mL	Potassium (K ⁺)	200 µg/mL		
			Lithium (Li ⁺)	50 µg/mL	Sodium (Na ⁺)	200 µg/mL		
IC cations mixture 2	4	0.2% HNO ₃	Ammonium (NH ₄ ⁺)	100 µg/mL	Potassium (K ⁺)	50 µg/mL	125 mL	ICC-310
			Lithium (Li ⁺)	10 µg/mL	Sodium (Na ⁺)	1,000 µg/mL		
IC cations mixture 3	4	0.2% HNO ₃	Barium (Ba ²⁺)	1,600 µg/mL	Magnesium (Mg ²⁺)	200 µg/mL	125 mL	ICC-320
			Calcium (Ca ²⁺)	400 µg/mL	Strontium (Sr ²⁺)	600 µg/mL		

Troubleshooting Tips and Tricks

Standard solutions are manufactured following strict procedures. They must be handled with care, as they are highly valuable assets when kept in good condition. Observing the following recommendations will help save time, money, and troubleshooting.

- Use only deionized water and high-purity acids or reagents to prepare calibration standards and samples. Your data is only as good as your lowest blank.
- Avoid pipetting directly from the original CRM container – always pour a small amount into a different, clean container and take your aliquot from there.
- Never return unused standard to the original Agilent container.
- Don't neglect preventive or routine maintenance. Most instrument problems are preventable.
- Replace pump tubing frequently to ensure consistent, reliable data.
- Preclean all labware and avoid use of glassware where possible, especially for trace-level applications.
- At the end of each working day, always rinse the sample delivery lines and the sample introduction system thoroughly before shutting off the instrument. The rinse solution should be prepared in the same solvent as the samples being analyzed.
- If at all possible, include both nitric acid (HNO_3) and hydrochloric acid (HCl) in standards and samples. The oxidizing power of HNO_3 will help decompose your samples, while the complexing power of HCl will minimize carryover and help solubilize many analytes, such as mercury and tin.
- Run as many blanks as possible (at least two or three) to establish the lowest possible background.
- Use aseptic techniques to prevent contamination. Remember, some gloves contain a high concentration of zinc.
- Always run daily instrument performance checks using the appropriate instrument tuning solution.
- When in doubt, consult your Agilent application engineer regarding any analytical questions that you may have.

Operational tips

- Always prepare your calibration standards from Certified Reference Materials manufactured in an ISO 9001, ISO 17034 facility and certified in an ISO/IEC 17025 testing lab. Certification ensures the highest levels of purity and quality with known uncertainties for precise, accurate calibration data and consistent performance, leading to greater productivity.
- Always try to matrix match your calibration standards to your samples. Matrix matching is easier if you use 1% (10,000 $\mu\text{g}/\text{mL}$) standards as stock materials for major sample components and keep the total concentration of all elements below 20,000 $\mu\text{g}/\text{mL}$ (2%).
- Verify instrument performance before analysis.
- Do not overtighten the pressure bar on any peristaltic pump tubing.
- Always detach the peristaltic pump tubing from the holder after use.
- Always rinse between samples and after analysis.
- Routinely clean the nebulizer by reverse-flushing.
- Soak the spray chamber overnight in 25% detergent to restore performance.
- Clean the torch by soaking in aqua regia and rinse afterwards.
- Ensure the torch is dry before re-installing.

Agilent consumable workflow solutions

Need a complete list of consumables (standards, sample preparation products, chromatography columns, and supplies) based on regulatory methods and your analytical instrument?

Agilent consumable workflow ordering guides provide application-specific product recommendations for environmental, food, pharmaceutical, and cannabis method workflows in an easy-to-order format. Each ordering guide includes links to the relevant application note with method protocols, parameters, and chromatograms.

Heavy metals testing in cannabis using ICP-MS

The cannabis consumable workflow ordering guide provides a list of ICP-MS supplies and standards required for analyzing 25 elements in cannabis and hemp using the Agilent 7800 ICP-MS system.

See the ordering guide at: <https://agilent.com/chem/cannabistesting-ordering-guide>

Trace metals in water and waste samples using ICP-MS

The consumable workflow ordering guide for EPA 200.8, EPA 6020A, and ISO 17294-2 methods offers a list of ICP-MS supplies and standards required to analyze trace metals in water and waste samples using an Agilent 7850 or 7900 ICP-MS system.

See the ordering guide at: <https://agilent.com/chem/tracemetals-ordering-guide>

Trace metals in water and waste samples using ICP-OES

If you need ICP-OES supplies and standards to analyze trace metals in water samples, the EPA 200.7 method ordering guide provides a full list for use with the Agilent 5000 series ICP-OES systems, based on EPA 200.7 methods.

See the selection guide at: <https://agilent.com/chem/metalsinwater-icp-oes>

To find ICP-OES supplies and standards for EPA 6010D methods, see our consumable workflow ordering guide for EPA 6010D methods.

Read the selection guide at: <https://agilent.com/chem/metalsinwaste-ordering-guide>

Technical support at work for you

Have a hardware, software, application, instrument repair, or troubleshooting question? Agilent's technical experts are available to answer your questions. With years of laboratory experience, our technical support specialists can provide in-depth knowledge and experience.

For questions about supplies found in this catalog, contact your local Agilent office or authorized Agilent distributor. Or visit www.agilent.com/chem/techsupport.

Agilent CrossLab: Supporting Your Success

CrossLab is an Agilent capability that integrates services and consumables to support workflow success, improve productivity, and enhance operational efficiency. In every interaction, we strive to provide insights that help you achieve your goals. We offer a wide range of products and services – from method optimization and training to full-lab relocations and operations analytics – to help you manage your instruments and your lab for best performance.

Learn more about CrossLab at www.agilent.com/crosslab.
